

PFE is a wholly owned British company, which has nearly 40 years experience in innovative product design and manufacture. PFE now offers the widest and most flexible range of folders and inserters available in today's marketplace, ranging from compact and flexible desktop mailing machines to high-volume, production mailing systems.

Automailer 5 Plus - A New Era in Production Mailing

Visitors to the prestigious Hall 1 at this year's CEBIT Trade Fair in Hannover, were able to view first-hand, PFE's new, production mailing machine Automailer 5 Plus. The Automailer 5 Plus's remarkably quiet operation, its consistent speed and running performance (8,000 filled envelopes per hour) and the ease of operation, were typical of some of the comments received.

PFE's Automailer 5 Plus offers total flexibility in mail processing from a few hundred letters per day, to consistent, around-the-clock production. Almost any system configuration is available, from a simple 2-station machine to a highly sophisticated 16-station installation, incorporating all of PFE's technical knowledge and expertise.

The Automailer 5 Plus is considerably quieter than other production mailing machines and is revolutionary in terms of programmability. Its unique, state-of-the-art, User Interface, once programmed, will automatically control all mail jobs, machine settings and adjustments, with minimal operator intervention at machine level.

PFE's latest edition to its mailing range is unparalleled within the industry and is set to take production mailing by storm.

PFE's new Pressure Seal Systems also generated a great deal of interest at CEBIT 2001. PressureSeal guarantees the tamper-proof, personalised and confidential distribution of a wide range of mailing items, from Company Payroll forms to Pin numbers and Sim card pin/puk number notifications. With PressureSeal, a single part form becomes a self-mailing document and the use of a PressureSeal form for such applications, already has wide acceptance from several leading global players. The AS 300, AS 500 and AS1200 machine (with the added capability to allow an insert to be added to the secure mailing) provide a fast, efficient and cost effective solution to a wide range of mailing tasks.

For visitors to CEBIT with low volume mailing requirements, there was PFE's Minimailer Plus Range. The Minimailer Plus range continues to lead the way in desktop mailing, answering the need for sophisticated mailing in a compact package.
